FOOD WASTE CONTAINERS

Purpose built containers are available in either 120 litre or 240 litre capacity to suit your needs. These containers have been specifically designed to ensure food waste is hygienically stored.

Hills also offers a range of caddies and pedal containers for storing waste within the kitchen, from 5 litre handled table top caddies to 60 litre pedal containers. Our sales representative will be able to find the best option for you.

The food waste containers and caddies are provided with biodegradable liners for the clean, hygienic collection of food waste. Liners keep caddies and containers clean, reduce odours and avoid interference from flies.

KEY FEATURES

- Spherical base – to ensure all waste discharges from bin when emptying – no residue build up
- Sturdy and smooth running solid rubber tyres
- Lockable lid with handles.

SUITEABLE WASTE TYPES

Food waste packaged in plastic and cardboard is permissible but currently we cannot process food waste presented in glass and tins as this is not permissible at the recycling facility.
food waste recycling

**COLLECTION**

Hills offers regular collections, scheduled using our state-of-the-art routeing software, ensuring an efficient and reliable service.

The plastic bodied, lightweight vehicle is specially designed for handling food waste and to avoid any leakages. It is ideal to manoeuvre round the back of shops, pubs and restaurants with ease.

**RECYCLING**

Hills gives you peace of mind, knowing that your food waste will be 100% recycled in Wiltshire using anaerobic digestion. This innovative technology will remove any packaging waste remaining within the food waste and process the waste to generate a gas, to create a renewable energy, fed directly into the National Grid as well as a digestate bio fertiliser, rich in nutrients, used in agriculture in place of synthetic fertilisers.
